RebellionOS Rebelized for Redmi Note 5 Pro [Whyred] #HowtoOn

Tuesday, the New York Times reported that Apple is facing a lawsuit over its role in helping the CIA carry out the surveillance of a U.S. resident. This may be one of the few occasions that a case about government snooping was handled by the Trump administration. The man in question is Abubakr al-Samiri, a Saudi college student. He had his iCloud account hacked, and the Times reports that he found the malware in his phone, later discovering it was American. Samiri's family had contacted the Saudi government, which enabled the FBI to track him down in Florida. The Times says Samiri was contacted in 2017 "to spy for the United States in Iran." The story is a stark reminder of the damage that law enforcement and the security services can inflict with ease. Last year, a top executive at Apple was apparently targeted for a similar hacking scheme. The story was reported in an article in The New York Times at the time. The reporter says

that Kevin Poulsen was hacked at the behest of a former U.S. attorney who was investigating a drug case. The prosecutor was tipped off that Poulsen, the senior technical director at security firm GreatPoint Ventures, had accessed files on the defendant's phone using the iCloud feature on his iPhone. The reported hacking lasted for months, and the defendant found out about it because prosecutors in the case told Poulsen, who then promptly filed a report with Apple. The victim said the man at the other end of the phone line was demanding to know if he had the file. "I still have it," Poulsen replied. "But you're not going to get it." Poulsen added: "I hope you're not that bad a prosecutor." This could easily have been a much wider story, if only because of the sensitivity of the hack. The case ended in a plea deal for one defendant, but the Daily Mail reported that it had been an investigation of more than one defendant. The case remains under seal, and it's unclear if the other person involved, including the law enforcement official who initiated it, is still a target or not. When the hacking was publicly discovered, Apple told reporters that it had

the v10 info says 10.0.19 is the official version and it says 10.0.20 has gone out for testing, so unless v10.0.20 is ready for release, then both whyred and karthik should be on the same version i use

RebellionOS as my launcher it is a different launcher than the other one. Rebel OS is very good for my phone. I just have the ROM for Redmi Note 4 Pro. I did not download the V10 ROM because i think it is still unstable. I think it is stable enough for everyday use. The ROM is about 6.8GB of pure Android. You will not find a ROM of 6.8 GB for the Redmi Note 5 Pro. Maybe 6.5 GB. You need to customize a lot on it. Credits to Angry_Archer for the reason why im on v10. The "official version" is v10.0.19. You will not find it in the play store, but You can get it here:

Whyred.net/notes/Redmi_Note_5_Pro-RebellionOS-V10.0.19.zip.Q:

Trying to copy pictures from an external hard drive to my local machine I have an internal hard drive that has over 100 GB of pictures and I would like to copy those pictures to my laptop.

Right now I'm taking the hard drive out, connecting it to my laptop and copying them from there, but that's a very long and tedious process. Is there any way to do this copying process from the hard drive to my laptop from inside Windows? I know that it's possible to do this from the command prompt, but I'm not an expert with the terminal. I'm using Windows 7 and the External HD is formatted with Fat32. A: I know this is an old thread, but I found this post interesting and would like to add some information. First, you can't mount a NTFS volume directly from

windows7, unless you have already installed the Windows XP Mode. So you will need to install an XP version of windows7, but that shouldn't be any more complicated than an install of windows 7. Next, because FAT32 is an open file system, you can mount and read and write to the drives from linux, although not directly from windows. There are some software tools available that allow
