MVC 2 - Form validation - Can't  
figure out why a field is not  
being validated I'm having a bit  
of an issue with my form  
validation. I am using the latest  
version of MVC2 and trying to  
make an update, I am adding a  
template field to my model.  
Everything works fine, except

---

for the fact that MVC is ignoring my model validation, and ignoring all the fields not part of the edit view (such as the new template field). I have found out that MVC is looking for a View Model instance (I believe, I am new to the MVC framework). I can add my ModelState.IsValid to the controller, or update the

---

ViewModel somehow, but I cannot figure out how to handle this. All I need is to validate all the fields in the controller/model that make up the edit view. A: You could create a viewmodel to map the view to. Then you could have the post action map the form to that viewmodel. The validation attributes on the

---

viewmodel would then be validated instead of the model. However, that is probably a lot of work for something

Few days ago I ran into a problem. I opened firefox web browser and when I clicked on "Browse" button it did nothing. I tried everything and nothing helps. I was surprized because everything was fine before. I tried to open firefox from

Stamina Publisher's  
Description: Stamina is a

---

lightweight Windows application whose purpose is to help users improve their typing skills by taking several tests. It sports a clean layout that offers several configuration settings to tinker with. The program gives you the possibility to test your skills by typing the correct letters or phrases that appear on the

---

screen. At the end of the test, you can view details about the time needed to complete the task, typing speed, and error percentage. Plus, you can check the test results in a graph. What's more, Stamina is able to provide overall statistics about the tests that you have taken and lets you remove the selected one from

---

the list. The utility features several built-in tests (e.g. basic lessons, digits and symbols) and allows you to import data from a plain text file. Plus, you can edit each test, add new phrases, and go to the previous or next test. Other notable characteristics worth mentioning are represented by the possibility to make the

---

program reveal a virtual keyboard on your screen, enable or disable the background music, create a playlist with your favorite songs (MP3, M3U), and adjust the volume. Last but not least, you are allowed to customize the text in terms of font size and color, pick the background color or upload a picture from

---

your computer (JPG, BMP), change the keyboard layout in terms of skin, size, and color, as well as add multiple users. All in all, Stamina seems to be the right choice in case you are looking for an easy-to-use application that helps you take several typing tests. It is suitable for all types of users, regardless of their experience
