New Life is necessary for you to feel that your life is going in a right path. There is no scope of life in negative thoughts. You will always be positive when you are positive. The first step is to change your thoughts and thoughts lead to actions.

When a human being is in negative thoughts, his mind is not related to life.

There is no reason to get happiness. There is no enjoyment in life. You will

face a lot of ups and downs in your life.

Founded in 2008, North America's leading human capital advisory platform has been built on helping its partners and clients identify and harness the human capital they need to achieve their business goals. With more than 20,000 Associates and a network of more than 1,000 offices, NAHC is the ultimate resource for critical human capital solutions.

1. Field of the Invention This invention relates to a bottle of improved configuration to avoid undesired breakage of the bottle in an inverted condition.

2. Prior Art A beverage bottle is typically filled with a beverage from a beverage container having a cap or closure. The beverage bottle is usually

inverted by a consumer and stored for an extended period of time prior to being used. This inverted condition is required to avoid the bottle leaking during storage or to avoid water accumulation in the bottle. Such leakage or the accumulation of water in the bottle can spoil the beverage in the bottle. Over the years, the beverage bottles have been developed to provide increased shelf life. In the case of carbonated beverages, the storage life is increased by providing a certain minimum amount of gas pressure within the bottle so that the pressure exerted by the gas on the wall of the bottle serves to maintain the carbonated condition. A typical measure of the gas pressure in a carbonated beverage bottle is the pressure

in atmospheres (ATM) of carbon dioxide. However, in recent years, the carbonated beverage market has become more competitive. The competitor is trying to provide a less expensive product. This is done, in part, by using a less expensive bottle for the carbonated beverage. The less expensive bottle is one which is more susceptible to breakage. The problem with such a less expensive bottle is that, if it is inverted, the consumer may be prone to take the bottle by the neck and tip the bottle over onto the floor. As the bottle is tipped over, it may be caught by the neck and the bottom of the bottle may crack and/or the bottle may be broken. This is due to the fact that the
