2.2.1 What is AutoCAD? AutoCAD is the most popular of the three CAD applications — AutoCAD, Microstation, and ArchiCAD — available from Autodesk, Inc. It is a commercial, full-featured CAD system, and is the most commonly used CAD application in the world. Autodesk's original intent with AutoCAD was for it to become a "real", full-featured CAD system that would enable the user to create accurate architectural and civil engineering drawings, making Autodesk's product the go-to CAD system. But the reality of the industry is that you don't need a real CAD application. Like other CAD software, AutoCAD will let you create drawings, draw floor plans, and generate 3-D models. Unlike other CAD applications, however, AutoCAD lets you manage and organize these documents. The following general categories of objects are considered part of the geometry that AutoCAD is capable of creating: lines polygons curves surfaces planes tools objects dialog boxes parametric views video regenerate (after cutting or copying) What is AutoCAD? AutoCAD is a true, feature-packed, commercial CAD application designed for 2D and 3D design. It can create 2D and 3D drawings and works in both vector and raster graphics modes. Users can create 2D and 3D drawings in a variety of file formats, and easily share and print them. Since its earliest days, AutoCAD has supported 2D and 3D drawing styles, including 2D drafting, technical drafting, 2D graphical design, 3D drafting, 3D graphical design, and architectural drafting. (Note: The methods for creating these drawing styles are beyond the scope of this book.) What can I do with AutoCAD? AutoCAD lets you create and draw 2D and 3D drawings that can be used to document and share information. You can create drawings for a variety of uses, including architectural, engineering, or interior design. AutoCAD lets you work efficiently by saving you time, giving you the power to make quick changes, and allowing you to easily organize and manage your designs. Unlike most other commercial CAD applications, AutoCAD is not just a CAD system

With coins that are not a currency such as Ripple or Dogecoin - I don't really see how one could say if it was 'a capital gain' or not, as there is no 'capital' to gain. What is meant by this phrase? A: Capital gain means you make a profit on capital invested. It's the same as a trader making a profit on stocks he or she bought. A cryptocurrency trader making a profit on capital invested is likely making a profit on the speculative value of the coin, not on the value of the coin itself (as in "you're really lucky you got in on that coin at the right time"). // Copyright 2009 the Sputnik authors.
